WIA Presentation
Lindsay Lambert

I chose Video.js for my plugin because I wanted to implement something very interesting to the viewer, as well as really portray what a plugin truly is and how it functions.

I also used a few animations that are essentially just plugins that are used within Reveal.js. These were also to show the viewers the real depth of what can be accomplished with plugins.

I was not exactly sure what was expected in this document, so I will include the active link both below and in a separate text file entitled, "WIA-link.txt."

I really enjoyed creating this project and learned so much about plugins and polyfills that I feel quite over-whelmed by everything that is available to us as Web Designers and Developers. I am also very grateful to have had the opportunity to be exposed to all these great tools.

This is my live link to my presentation:
http://youtu.be/QZNL2heSlgM

*It can also be found in the Discussion on FSO and the text file in the zip.
